

CryoFill with ReAssure connection

The new ReAssure monitoring solution from Planer, offers users simplicity combined with sophistication. Scalable from one up to a thousand sensors - ReAssure offers users intuitive access to real time monitoring data through a variety of desktop and mobile devices. With the tendency to consolidate stored materials into larger cryogenic vessels, the CryoFill controller not only coordinates filling of vessels, but also provide monitoring data.

Such information can be easily incorporated as part of a ReAssure monitoring system via CryoFill. Additionally, ReAssure can be used with an independent temperature probe to meet today's regulations requiring independent monitoring.

- ReAssure can also set 'acceptable' alarm conditions. If the reading falls outside these, alarms come via SMS/ phone (landline & GSM) or as visual and audible alarms.
- Remote access allows log in online via a web browser (secure user name and password) - with different access levels for each user.
- "False" alarms can be avoided by adding delays before sending certain types of alarms and by ignoring certain aspects of alarms such as communication errors.
- Interpreting alarms on a screen is easy with green/red status indicators.

THE FOLLOWING DATA CAN BE MONITORED WITH REASSURE:

- Temperature
- LN2 Level
- LN2 Usage
- Alarm Status
- Plus much more
